

Threats are Evolving. So Should Your Pentesting.

Delivered by an elite team of security professionals, Stratascale's penetration testing services combine advanced custom tooling, dedicated exploit research, and real-world testing experience to identify and demonstrate security weaknesses before malicious actors can exploit them.

If you're just looking to check an annual pentest box, we're probably not a fit. If you're ready to take an offensive approach to security and partner with battle-tested experts, you'll benefit from our services. Our penetration testing is thorough, informed by the latest in security research, and designed to adapt to the ever-evolving cyber landscape.

Custom Toolset

Our in-house toolset and development capabilities means we can rapidly adapt to new attack surfaces and client needs, rather than being constrained by commercial tool limitations.

Cutting-Edge Exploit Development

Our dedicated Cyber Research Unit performs continuous exploit development and research, staying ahead of the latest cybersecurity trends to provide unparalleled testing that validates research findings in your environments.

Comprehensive Risk Validation

Unlike standard vulnerability scans, our deep dive testing rigorously uncovers potential risks and thoroughly validates their legitimacy, empowering you to address real threats.

Tailored, In-Depth Assessments

We go beyond automated scans, offering personalized assessments that identify and prioritize vulnerabilities, delivering actionable insights.

Stay One Step Ahead Of Attackers

Our highly experienced team brings forth specialized skill coverage that competitors can't match, enabling us to perform a range of offensive security engagements.

- Cloud Penetration Testing
- External Penetration Testing
- Internal Penetration Testing
- Social Engineering Phishing Testing
- Web Application Testing
- Wireless Network Penetration Testing
