

Uplevel Your Cloud Security

CNAPP Accelerator

Stratascale's CNAPP Accelerator goes beyond standard tool integration, establishing a foundation for continuous compliance and cloud security.

Leveraging our proprietary Doppler Framework and deep cloud security expertise, we accelerate the strategic adoption of CNAPP while establishing the relevant policies, procedures, controls, automations, and integrations to strengthen your overarching cloud security posture.

We operationalize all available CNAPP capabilities to create a global layer of business-aligned customizations on top of standard configuration.

A Tailored & ROI-Driven Approach

While there are many strong CNAPP tools on the market, tools alone do not address the whole cloud security picture. This is especially true for tools that are implemented with generic onboarding best practices and/or without policy guidance or custom controls. Our offering goes beyond the basics and transforms your cloud security operating model, positioning your entire security and DevOps organization to continuously manage evolving threats with ease.

Streamline platform setup, introduce new controls, and develop tailored CNAPP queries

Develop a robust reporting and alerting layer that is customized to your needs

Advise on architecture and configurations for third-party tools

Identify and simplify time-consuming processes through automation

Provide detailed maturity rankings and a feature utilization roadmap to get long-term value from your CNAPP

Accelerate Adoption & Value Realization

Our offering accelerates the adoption of CNAPP features to improve your cloud security posture, reduce risk, and achieve compliance. If you're ready to uplevel your cloud app security and get maximum ROI from your CNAPP, contact us.
